

📱 Calculator using Python Tkinter

📌 Project Objective

This project was created as part of the `***Calculator with Tkinter***` assignment.

It is a fully functional calculator GUI built using Python's Tkinter library, supporting all basic arithmetic operations.

🎯 Features

- Clean and responsive GUI using `Tkinter`
- Supports:
 - Addition (+)
 - Subtraction (−)
 - Multiplication (×)
 - Division (÷)
 - Decimal input
 - Clear (C) button
 - Backspace ⌫
 - Evaluation (=)
- Displays live input as user presses buttons

💻 Technologies Used

- **Python 3**
- **Tkinter** (Python's standard GUI library)

🧪 How to Run

1. Make sure Python is installed.
2. Open terminal / command prompt.
3. Run the following command:

```
```bash
```

```
python calculator.py
```
